4	10-06-2021	Social Studies (Geography)	Volcanic Eruptions	1) Students will understand the differences among global climate change, global warming, and weather. 2) Students will get the knowledge for about types of Volcanoes.	Power Point Presentation :- 1) 1st Slide :- Introduction page (Write name of the project, Student name, Class, Section) 2) 2nd Slide :- Main picture of Volcanic Eruptions and explanation of the picture. 3) 3rd Slide :- What is Volcanoes and Volcanic Eruptions. 4) 4th Slide :- Types of Volcanoes and Distribution of Volcanoes. 5) 5th Slide :- Advantage and Disadvantage of Volcanoes	29/06/2021
5	10-06-2021	Science	Balloon blow up experiment by using baking soda and vinegar	1. Student will develop scientific analytical skills. 2. Student will develop experimental and application skills. 3. Student will understand chemical reaction and the science behind the experiment.	1. Student will make a video with doing the experiment. 2. Before doing the experiment student have to give a brief introduction about his/her class, name ,section. 3. For doing this experiment first pour 1/2 cup of vinegar into the empty water	22.6.21

S.NO	Submit Date	SUBJECT:	CONTENT:	LEARNING OUTCOMES:	INSTRUCTIONS:	SUBMISSION DATE:
					<p>bottle. Use a small spoon and carefully add baking soda into the balloon until it's about 1/4 full. attach the balloon to the top of the bottle; make sure not to pour the baking soda into the vinegar. Now after attaching the balloon to the bottle holds up the balloon so the baking soda falls into the vinegar, creating a chemical reaction and blowing up their balloon. When baking soda and vinegar are mixed together, it creates a gas called carbon dioxide. The gas begins to expand in the bottle and starts to inflate the balloon. The more gas that is created, the larger the balloon will inflate. 5. The video length should not be more than 2 min 30 seconds. 6. While doing the experiment students have to</p>

					wear the school uniform. 7. In the video Student have to explain that The science, behind this balloon baking soda experiment, is the chemical reaction between the base – baking soda – and the acid – vinegar. When the two ingredients mix together it creates a gas called carbon dioxide. The gas begins to expand in the bottle and starts to inflate the balloon. The more gas that is created, the larger the balloon will inflate.
